

EECS 598-006: *Intro to CSE Graduate Studies*

Time: Thu, 10:30am-noon

Instructors: David Fouhey & Alanson Sample

Units: 1 Credit, Satisfactory/Unsatisfactory

This seminar series is designed to introduce you to the skills needed to be a successful graduate student researcher in computer science and engineering. Throughout this course, not only will you be exposed to new research methods early in your career, but you will become familiarized with skills that current graduates have found integral for success.

This course is intended for *incoming* CSE PhD students. Others will be admitted with permission from the instructor.

Faculty and current graduate students will host seminars throughout the semester that will:

- Prepare you to conduct research in computer science
- Provide advice on forming effective and healthy relationships with your advisor(s) and colleagues
- Develop your skills in technical communication
- Prepare you for future positions, from being a GSI to finding an internship and beyond!
